Personal Statement & Career Objective

In a world that is becoming more and more immersed in, and reliant on technology, I am someone who wants to be involved in the development of this space. I am a front-end developer & UX Designer looking to work on the development of websites, web-applications and full stack applications. I enjoy each phase of projects including research, design, development and testing. I hope to be involved in this process professionally. I have a problem solving and solution oriented mindset, which allows me to contribute to these projects effectively and successfully.

When I am not designing and building projects, I am usually riding my bike, playing disc golf or hiking around New Zealand.

Skills

Front-End Development

I feel I am very experienced in front-end development for a newly graduated student. I've worked extensively on projects throughout my time of study with HTML, CSS, SASS, JavaScript, Bootstrap, JQuery, external API's, Node.js, MongoDB and Custom WordPress themes using PHP.

I also have a solid understanding of Adobe suite (Illustrator, Photoshop, InDesign) and design software tools such as Figma and Canva. Feel free to check out some of my projects using these front-end tools and software on my behance profile.

Problem Solving

With a streak of creativity, my main approach to work is to maintain a strong and logical style of thought. I always try to understand the underlying causes of problems when faced with issues, as it is an effective way to draft and seek the best possible solutions. While studying at Yoobee School of Design, I have learnt how to deal with and solve complex problems, whether this is

code specific, cooperating with others, or design based. I find it satisfying and enjoyable to overcome issues, so that I can rework and model off the skills I use to fix one problem, to assist with another.

Leadership

During my time at Yoobee, I worked alongside 3 and 4 person teams on projects as a scrum master, while using agile methodology. I ran a stand up meeting every session, delegated tasks and managed short term and long term goals. I used platforms such as Microsoft teams, Asana, Jira and GitHub to help foster the success of these projects. Before studying at Yoobee, I was captain of my hockey team and a house captain. This role and other sports commitments taught me significantly about respect, responsibility and team management from a young age. This has significantly influenced my work behavior and ethic to be one of an agile and flexible leader.

Work History

Iron Mountain - Digital Resource Specialist

Information Management Company

Responsibilities:

- Work with private clients to create a process for data storage & destruction
- Quality checking information
- Processing, entering and formatting data

Bus and Coach Association NZ - Contract Work (Mar - May 2023)
